1. About Xevast

Xevast is a technology company founded with a single purpose: to help businesses grow through well-built, reliable, and modern technology. The company was created to bring together core digital services — web and app development, software development, cloud technology, and cybersecurity — under one dependable brand, rather than businesses having to look for separate vendors for each need.

The name Xevast and its mark — two angular blades in red and white forming an 'X' inside a circular ring — were designed to represent speed, precision, and duality: the balance between innovation (red) and reliability (white), working together toward one outcome.

Origin

Xevast was founded by Anshu Kumar, who serves as Founder and CEO. The company began as a single-founder initiative, with the intention of building it into a full-fledged technology company — and eventually, a parent company overseeing multiple specialized divisions as the business grows.

Mission

To empower businesses through technology, innovation, and excellence — turning digital ideas into reliable, real-world solutions.

Vision

To grow from a single technology company into a parent company that nurtures multiple specialized businesses — each carrying forward the same standard of trust and quality Xevast was built on.

Core Values

- **Innovation** — using the right technology for each problem, not just the familiar one.
- **Reliability** — delivering work that is stable, secure, and built to last.
- **Transparency** — clear communication with clients at every stage of a project.
- **Client-first thinking** — solutions shaped around the client's business, not a fixed template.

2. Leadership

Founder & CEO	Anshu Kumar
Role	Oversees strategy, client relationships, and (at this stage) hands-on development of client projects.

At this stage, Xevast operates with the founder personally handling development work. As the client base grows, the plan is to bring on a team and freelancers to scale delivery while maintaining quality.

“Every business deserves technology that works as hard as they do. At Xevast, we don’t just build websites and software — we build the digital foundation businesses need to grow with confidence.”

— Anshu Kumar, Founder & CEO

3. Services (15 Divisions)

Xevast organizes its offering into 15 divisions covering development, design, cloud, security, AI, data, marketing, support and training. Together they let a client work with one partner from the first idea through to launch, protection and long-term support.

01

Web & Software Solutions

Modern, fast and scalable websites and software built around how each business actually operates — not forced into generic templates.

- **Website development** — business sites, portfolios and landing pages that are fast and mobile-responsive
- **E-commerce solutions** — online stores with product management and payment integration
- **SaaS product development** — subscription-ready software products, from idea to launch
- **API & integration services** — connecting systems, payment gateways and third-party tools
- **QA & software testing** — functional, performance and cross-device testing before delivery

02

Mobile App Development

Mobile applications designed for real users and real business goals, built to be smooth, reliable and easy to maintain.

- **Android & iOS apps** — apps for both major platforms
- **Cross-platform apps** — one codebase for multiple platforms, faster and more cost-efficient
- **App maintenance & updates** — bug fixes, compatibility updates and new features

03 UI/UX Design

Clean, intuitive interfaces that make products easy to use. Wireframes and structure are shared with the client for approval before development begins.

- **Website, app & dashboard design** — user-friendly layouts and interfaces
- **Branding & logo design** — logo and visual identity that fits the business

04 Cloud & DevOps Solutions

Secure, reliable and scalable cloud infrastructure, with automation that keeps releases fast and systems stable as demand grows.

- **Cloud setup & migration** — moving applications and data to secure cloud environments
- **DevOps & CI/CD** — automated build, test and deployment pipelines
- **Cloud security** — secure configuration and access control for cloud workloads
- **Hosting & domain services** — domain registration, hosting setup and management

05 Security Solutions

Protective security services that safeguard client systems and data from digital threats, from testing and monitoring to purpose-built defence software.

- **Cybersecurity** — protective services for systems, applications and data
- **Ethical hacking** — authorized testing that finds vulnerabilities before attackers do
- **VAPT / Red teaming** — vulnerability assessment, penetration testing and simulated attacks
- **SOC & threat monitoring** — continuous monitoring and alerting for suspicious activity
- **Cyber defence software development** — purpose-built tools that strengthen an organization's security posture

06 Network & Infrastructure Security

Securing the networks and servers that businesses run on, so that offices and systems stay protected and available.

- **Firewall & VPN setup** — controlled, encrypted access to internal resources
- **Office & server network security** — secure configuration and network design
- **Network monitoring** — visibility into traffic and early detection of anomalies

07 Cybersecurity Consulting & Compliance

Advisory support that helps organizations understand their risks, close gaps and prepare for recognized security standards.

- **Security audits** — structured review of systems, processes and controls
- **ISO 27001 & compliance support** — guidance toward standards and documentation
- **Security policy & risk assessment** — clear policies and prioritized risk findings

08 Security Research Lab

An internal research function focused on understanding how attacks work, which strengthens the defences Xevast builds for clients.

- **Bug bounty & vulnerability research** — finding and responsibly reporting weaknesses
- **Malware analysis** — studying malicious software behaviour
- **Threat intelligence reports** — practical summaries of emerging threats

09 AI Solutions

AI-driven tools and agents that automate repetitive work and help businesses respond faster, with security considered from the start.

- **AI agents** — task-focused agents that automate workflows
- **Chatbots & automation (RPA)** — customer support bots and automation of repetitive processes
- **AI security** — protecting AI models, agents and data pipelines

10 Digital Forensics & Incident Response

Support for organizations after a security incident: finding out what happened, containing it and recovering safely.

- **Investigation & evidence collection** — careful, documented handling of digital evidence
- **Data recovery** — restoring accessible data where possible
- **Post-breach incident handling** — containment, analysis and recovery steps

11 Data & Analytics

Turning business data into clear, usable information that supports better decisions.

- **Dashboards & reporting** — live views of the numbers that matter
- **Business intelligence** — structured analysis of business performance

12 Digital Marketing & SEO

Helping newly built websites and products get found and get noticed.

- **SEO & website ranking** — improving visibility in search results
- **Social media & brand marketing** — building a consistent brand presence
- **Google & social ads** — paid campaigns aimed at the right audience

13 System Design & Custom Solutions

Architecture and tailor-made solutions for needs that off-the-shelf products cannot meet.

- **System architecture design** — planning scalable, maintainable systems
- **Custom software** — built as per each client's requirements
- **IT consulting** — practical technology guidance for business decisions

14 Managed IT & Support Services

Ongoing care after launch so that systems stay updated, monitored and working.

- **Monthly maintenance & support** — regular updates, fixes and improvements
- **Server & system monitoring** — keeping an eye on uptime and performance
- **Technical helpdesk** — a point of contact when something needs attention

15 Xevast Academy

Learning and awareness programs that build skills, for students and for teams inside client organizations.

- **Courses & internships** — practical technology learning
- **Cybersecurity workshops** — hands-on sessions on security fundamentals
- **Employee security awareness training** — helping staff recognize and avoid common threats

4. Who We Serve

Xevast primarily works with:

- Small and medium businesses that need a strong, professional digital presence.
- Startups looking for a technology partner to build their first product.
- Businesses wanting to modernize outdated websites, software, or infrastructure.
- Organizations seeking security assessments to protect existing systems.

5. Why Choose Xevast

- A single point of contact for web, app, software, cloud, and security needs.
- Solutions built specifically around each client's business, not generic templates.
- Direct communication with the founder throughout the project.
- Modern, clean, and performance-focused development practices.
- A long-term partner as the client's business — and technology needs — grow.

6. Our Process

Every project follows a clear, structured process designed to keep clients informed and in control from start to finish.

1 **Discovery**
Understanding the client's business, goals, and requirements in detail before any design or development begins.

2 **Planning & Design**
Creating a wireframe or structural plan and sharing it with the client for approval before development starts.

3 **Development**
Building the solution in stages, with regular progress updates shared with the client throughout.

4 **Testing**
Thorough testing across devices and use cases to ensure everything works as expected before delivery.

5 **Delivery & Support**
Final delivery of the completed product, followed by ongoing support and maintenance as needed.

7. Technology We Work With

Xevast uses modern, proven technologies suited to each project's needs, including:

Area	Technologies
Frontend	HTML, CSS, JavaScript, React, Next.js
Backend	Node.js, databases such as MongoDB and PostgreSQL
Hosting & Cloud	Vercel, Netlify, Hostinger, and other cloud platforms as needed
Security	Industry-standard practices for secure development and testing

The specific technology stack for each project is chosen based on the client's requirements, scale, and budget.

8. Payment & Support Policy

Payment Methods

Payments are accepted via UPI and bank transfer.

Payment Structure

A partial advance (typically 30–50% of the project cost) is required before work begins, with the remaining balance due upon completion and delivery.

Revisions

Each project includes two rounds of revisions as part of the standard engagement. Additional revisions beyond this are billed separately, as agreed with the client.

Post-Launch Support

Optional monthly maintenance and support plans are available for clients who want ongoing updates, fixes, or improvements after launch.

9. Our Work

Xevast is in the early stages of building its client portfolio. As projects are completed, this section will be updated with case studies and work samples.

In the meantime, prospective clients are welcome to request examples of design and development capability directly during a consultation.

10. Business Structure & Growth Plan

Xevast is currently structured as a single company offering all services under one brand. The long-term plan is for Xevast to function as a parent company, with each major service area eventually operating as its own dedicated entity.

This phased approach allows Xevast to first establish a strong, trusted single brand, build a track record with clients, and then expand into a group structure once the business has the scale to support it.

Proposed Future Divisions and the services they would hold

Future Division	Services under it
Web & Software Solutions	Web & Software Solutions, Mobile App Development, UI/UX Design, Data & Analytics, Digital Marketing & SEO
Cloud Solutions	Cloud & DevOps Solutions, Managed IT & Support Services
Security Solutions	Security Solutions, Network & Infrastructure Security, Cybersecurity Consulting & Compliance, Security Research Lab, Digital Forensics & Incident Response
AI Solutions	AI Solutions
System Design & Custom Solutions	System Design & Custom Solutions
Xevast Academy	Courses & internships, workshops, security awareness training

This grouping is a proposed plan and may change as the company grows.

11. Engagement & Pricing Overview

Pricing depends on project scope, complexity, and timeline. The ranges below are indicative starting points for common project types:

Project Type	Indicative Range (INR)
Landing Page	5,000 – 15,000
Business Website (5–6 pages)	15,000 – 40,000
E-commerce Website	30,000 – 80,000+
Custom Web Application	50,000+

Final pricing is confirmed after an initial consultation, based on exact requirements. Pricing for services outside the list above (such as security, cloud, AI and support services) is also quoted after consultation. A partial advance payment is typically required before work begins, with the balance due on completion.

12. Brand Identity

Xevast's visual identity uses a black, red, and white color palette, reflecting a bold and modern technology brand. The logo mark — two angular blades forming an 'X' — is designed to be distinctive and memorable, paired with the tagline “Technology • Innovation • Excellence,” which summarizes the company's core commitment to every client engagement.

Black | Red | White

13. Online Presence

Instagram	@xevast.official
Portfolio Website	In development — showcasing services, capabilities, and future client work.

14. Frequently Asked Questions

Q: How long does a typical website take to build?
A: Timelines depend on scope, but most standard business websites are completed within two to three weeks of finalized requirements.

Q: Do you provide support after the project is delivered?
A: Yes. Optional ongoing maintenance and support arrangements are available after delivery.

Q: Who owns the final code and design?
A: Full ownership of the completed work transfers to the client upon final payment.

Q: What is needed to get started on a project?
A: A completed requirement form and an initial advance payment to begin work.

Q: Can Xevast improve or redesign an existing website or system?
A: Yes — redesigning and modernizing existing websites, software, and infrastructure is a core part of what Xevast offers.

Q: Does Xevast offer security testing?
A: Yes. Ethical hacking and VAPT services identify and help fix vulnerabilities in a client's systems through authorized testing.

Q: Can you build a mobile app as well as a website?
A: Yes. Mobile app development is offered as its own division, alongside web development and UI/UX design.

15. Terms & Confidentiality

All project details, business information, and materials shared by a client with Xevast are treated as confidential and are not shared with third parties without consent.

Formal contracts and non-disclosure agreements (NDAs) can be provided on request for projects requiring additional legal assurance.

Standard engagement terms — including payment structure, revision limits, and delivery timelines — are confirmed in writing with each client before a project begins.
